

Monthly Report Mont Blanc

August 2026

Monthly Commentary

Equity markets were mixed in August 2026: after last month's weakness, technology stocks stabilised, while defensive sectors gave up some ground at times. The US Federal Reserve signalled the first rate-cut steps for the autumn, which pushed bond yields slightly lower, while the ECB left its key rate unchanged and continued to monitor inflation developments in the eurozone.

Mont Blanc recorded a monthly gain of 1.76% in August.

Investment strategy

The "Mont Blanc" portfolio invests in globally diversified equity ETFs with a clear ESG focus. Regional allocation covers developed markets such as the US, Europe and Japan as well as emerging markets to increase diversification. Sustainable corporate and green bonds are added to cushion price fluctuations. The strategic weighting is 60% equity ETFs and 40% bond ETFs. The portfolio is aimed at long-term investors who want to invest responsibly and participate in global market opportunities.

Asset management

The investment strategy is implemented by our partner Finax in cooperation with UnitPlus on the basis of defined guidelines. The portfolio is managed passively; adjustments are made only in the event of deviations from the strategic allocation.

Benchmark

There is no overarching benchmark, as the portfolio invests partly in equities and partly in bonds. The reference indices of the ETFs held in the portfolio serve as guidance.

Financial instruments

The portfolio consists exclusively of exchange-traded equity and bond ETFs. There are no fixed caps on individual positions.

Portfolio valuation

Within the app, the updated portfolio valuation is shown at least once a day. A monthly update is carried out on the last business day of the month using data from the respective ETF providers' websites.

Objectives & risk

The aim is long-term wealth accumulation at moderate risk. The investment strategy focuses on diversification, sustainable returns and capital preservation over an investment horizon of at least five years. The portfolio is assigned to risk class 4 of 7 (medium). No leveraged products or complex derivatives are used. Risks from market volatility, currency fluctuations and political change may occur but are limited through broad diversification.
