

Monthly Report Mount Everest

August 2026

Monthly Commentary

Equity markets were mixed in August 2026: after last month's weakness, technology stocks stabilised, while defensive sectors gave up some ground at times. The US Federal Reserve signalled the first rate-cut steps for the autumn, which pushed bond yields slightly lower, while the ECB left its key rate unchanged and continued to monitor inflation developments in the eurozone.

Mount Everest recorded a monthly gain of 2.9% in August.

Investment strategy

The "Mount Everest" portfolio invests broadly in global equity ETFs under ESG criteria. The focus is on developed markets, complemented by emerging markets for geographic diversification. Sustainable corporate and green bonds are added to specifically reduce price fluctuations. The strategic weighting is around 90% equity ETFs and 10% bond ETFs. The portfolio is designed for a long-term investment horizon and is aimed at responsible investors seeking to participate in global capital-market returns.

Asset management

The investment strategy is implemented by our partner Finax in cooperation with UnitPlus on the basis of defined guidelines. The portfolio is managed passively; adjustments are made only in the event of deviations from the strategic allocation.

Benchmark

There is no overarching benchmark, as the portfolio invests partly in equities and partly in bonds. The reference indices of the ETFs held in the portfolio serve as guidance.

Financial instruments

The portfolio consists exclusively of exchange-traded equity and bond ETFs. There are no fixed caps on individual positions.

Portfolio valuation

Within the app, the updated portfolio valuation is shown at least once a day. A monthly update is carried out on the last business day of the month using data from the respective ETF providers' websites.

Objectives & risk

The aim is long-term wealth accumulation through global diversification, an ESG focus and an allocation to stabilising bonds. The portfolio is assigned to risk class 4 of 7 (medium). No leveraged products or complex derivatives are used. Risks from market volatility and currency fluctuations are limited through broad diversification.
