

Monthly Report MultiPlus

August 2026

Equity markets were mixed in August 2026: after last month's weakness, technology stocks stabilised, while defensive sectors gave up some ground at times. The US Federal Reserve signalled the first rate-cut steps for the autumn, which pushed bond yields slightly lower, while the ECB left its key rate unchanged and continued to monitor inflation developments in the eurozone.

MultiPlus recorded a monthly gain of 0.52% in August.

Portfolio Information

Number of ETFs	5
Asset classes	70% equities, 30% bonds

Investment strategy

The "MultiPlus" portfolio is composed of active ETFs from Goldman Sachs Asset Management and is a multi-asset portfolio. This means that alongside 70% equities, 30% bonds are added for better diversification. The focus is on Europe, where around 50% of all investments are made.

Asset management

The investment strategy is implemented by our partner Finax in cooperation with UnitPlus on the basis of defined guidelines. The portfolio is managed passively; adjustments are made only in the event of deviations from the strategic allocation.

Benchmark

There is no overarching benchmark, as the portfolio invests partly in equities and partly in bonds. The reference indices of the ETFs held in the portfolio serve as guidance.

Financial instruments

The portfolio consists exclusively of exchange-traded equity and bond ETFs. There are no fixed caps on individual positions.

Portfolio valuation

Within the app, the updated portfolio valuation is shown at least once a day. A monthly update is carried out on the last business day of the month using data from the respective ETF providers' websites.

Objectives & risk

The aim is long-term wealth accumulation with global diversification and a slightly active focus through active ETFs. The addition of bonds increases stability while preserving return potential. The portfolio is assigned to risk class 4 of 7 (medium). No leveraged products or complex derivatives are used. Risks such as market volatility or currency fluctuations are mitigated through broad diversification.
